

Problem 10; P1:

A)

valley(L)

valley\_down(L)

valley\_up(L)

$$\text{valley\_up}([x_1, x_2 | R]) = \begin{cases} \text{valley\_up}([x_2 | R]), & \text{if } x_2 > x_1 \\ \text{False}, & \text{otherwise} \end{cases}$$

$$\text{Valley\_down}([x_1, x_2 | R]) = \begin{cases} \text{valley\_down}([x_2 | R]), & \text{if } x_2 < x_1 \\ \text{False}, & \text{otherwise} \end{cases}$$

$$\text{Valley}(L) = \begin{cases} \text{false}, & \text{if } L < 3 \\ \text{valley\_down}(L), & \text{if first pair decreases} \\ \text{false}, & \text{if the first pair doesn't decrease} \\ \text{valley\_up}(L), & \text{if we find an increasing pair} \\ \text{false}, & \text{otherwise} \end{cases}$$

B)

alt\_sum(L, Sign, Acc)

$$\text{alt\_sum}([x_1 | R], \text{Sign}, \text{Acc}) = \begin{cases} \text{Acc}, & \text{if } L = [] \\ \text{alt\_sum}([R], -\text{Sign}, \text{Acc} + \text{Sign} * x_1), & \text{otherwise} \end{cases}$$

Source code: A)

% valley(List)

% a. Check if a list has a 'valley'

valley([A,B|Rest]) :-

    A > B,                      % start decreasing  
    valley\_down([A,B|Rest]).

% first half: decreasing until we find a number bigger than the current number

valley\_down([A,B|Rest]) :-

    ( B < A ->  
        valley\_down([B|Rest]);  
    B > A ->  
        valley\_up([B|Rest])  
    ).

% second half must be strictly increasing

valley\_up([A,B|Rest]) :-

```
B > A,  
valley_up([B|Rest]).
```

```
valley_up([_]).      % if it reached the end it succeeded
```

```
B)  
% alt_sum(List,Sum)  
% b. Sum = alternating sum of the List
```

```
alt_sum(List, Sum) :-  
    alt_sum(List, 1, 0, Sum).  % Sign is +1, accumulator is 0
```

```
% base case for empty list  
alt_sum([], _, Acc, Acc).
```

```
% recursive case  
alt_sum([A|Rest], Sign, Acc, Sum) :-  
    NewAcc is Acc + A * Sign,  
    NewSign is -Sign,  
    alt_sum(Rest, NewSign, NewAcc, Sum).
```
